

Acme Corp — Enterprise Systems Architecture Overview

Prepared by Platform Engineering. Internal. Q2 review.

1. Customer & Revenue Systems

Our system of record for customers and pipeline is **Salesforce** (CRM). It manages Account, Contact, Opportunity, and Quote objects and supports the lead-to-cash process. Integrations authenticate using OAuth 2.0 (connected app).

Finance runs on **NetSuite** (ERP). It owns Sales Order, Invoice, and Vendor Bill records and supports invoicing and revenue recognition. The NetSuite REST API uses token-based authentication (TBA).

2. Procurement & Data

Procurement is handled by **Coupa**. It owns Purchase Requisition and Purchase Order entities and supports the procure-to-pay process; the Coupa API uses an API key.

Analytics is centralised in **Snowflake**, our cloud data warehouse. It ingests data from finance and product for reporting. Access uses key-pair authentication.

3. Identity

Single sign-on is provided by **Okta**. All employee application access is federated through Okta via SAML. User and Group are the core entities.

Summary table

System	Category	Auth	Criticality
Salesforce	CRM	OAuth 2.0	Critical
NetSuite	ERP	Token (TBA)	Critical
Coupa	Procurement	API Key	High
Snowflake	Data Warehouse	Key-pair	High
Okta	Identity / SSO	SAML	Critical
